ACTIVITY 3

Follow one customer's data

Work in pairs. One message arrives in the mortgage assistant from Day 3's tabletop. Fill in every place it could be kept. Put a **red box** round anything you cannot fill in: that is a finding, not a failure.

The message

"My husband died in March and I don't know what to do about the account."

Place it could be kept	Kept? (yes, no, don't know)	For how long	In which country	Who can delete it
Context window (this conversation)				
Session memory, including any summary or compaction				
Long-term store (anything remembered about the customer)				
Retrieved or indexed copy (documents, case notes)				
Trace and logs (CSOB's own)				
Model provider's logs and abuse monitoring				
Subprocessor used for "overflow capacity"				

The hosting map (fictional): the agent runs in CSOB's own cloud tenant in the Czech Republic. The model is provided by a vendor with EU hosting. Logs go to a logging service. The vendor's documentation names one subprocessor outside the EU for overflow capacity.

Mark with a dot on the wall chart each place where both pairs had a red box.
