ACTIVITY 6 | OPERATING MODELS

The wall against the matrix

Work in groups of three. **Reader**: reads each incident title and says in one line what happened. **Marker**: holds the pen. **Challenger**: asks "would that really have stopped it?" Do two incident columns fully before filling in the rest.

Control	Replit (D2)	Air Canada (D2)	postmark-mcp (D2)	GitHub MCP (D2)	Knight Capital (D3)	Grok (D3)	EchoLeak (D3)	Samsung (D4)	Eleven-day loop (D4)	Garante (D4)	Add: Amazon Q	Add: Deloitte	Who runs it today?	Must-have or nice-to-have?
Retrieval access trimming (Day 1)														
Tool and MCP server approval and scopes (Day 2)														
Boundary policy: who may do what, decided outside the agent (Day 2)														
Gateway filtering of prompts and responses (Day 3)														
System prompt change control (Day 3)														
Escalation review (Day 3)														
Agent configuration record and re-testing after changes (Day 3)														
Tracing and alerting (Day 4)														
Cost monitoring and caps (Day 4)														
Residency and subprocessor checks (Day 4)														
Guardrail tuning and monitoring (Day 4)														
Approved tools and staff data-entry rules (Day 4)														
Your own control														

How to mark. Tick a cell where the control would have caught the incident or limited the damage. Put a cross where it would have missed it. Who runs it: CSOB Security, CSOB IT or platform, the parent organisation, a vendor, **nobody** or **don't know**. "We don't know" is a finding, not a failure.

Circle two controls with many ticks and an unclear or outside owner. Write the one question you would ask each owner, then copy it onto a red sticky note and put it on the board.	
Control 1 and the question:	
Control 2 and the question:
