CAPSTONE | THE REVIEW BOARD

Review pack: write silently for five minutes, then in the group

Subject: your Day 2 architecture sketch, or the Day 3 tabletop agent with its configuration record. Use your Activity 3 sheet for the data boxes and your matrix for the "who operates it" row. **Authors:** Architect, Operator, Scribe.
Group name: _____

1 The system in one sentence What it does, for whom, what it can touch.	**2 Provisional risk class and why** Which class? What fact would change it? Which rules does it touch?	**3 Personal data and residency** Where does it rest, for how long, in which country? Where did you have a red box?
4 What is traced and what would wake someone at 02:00 Which alert, who is paged, what do they check first? Does every trace carry the configuration revision?	**5 What stops a loop and what limits cost** Cap per run? Cap per agent per hour? Who can stop it at 03:00?	**6 Guardrails: which, where, who tunes them** Input, output, action, human. What is the test set? Who notices if one stops working?
7 Configuration record and drift What is in it? Who is told when a line changes? What is re-tested after a change?	**8 The failure you would inject first** From Day 3's table. Who is told before you do?	**9 Who operates each of the above** From your matrix. Write 'nobody' or 'don't know' where it is true.
10 Evidence you could show a committee For each box: what would you put on the table? Where you have only a claim, say so.	**11 What you did not know** The honest list.	**12 Your biggest open question for CSOB's risk function** One question.

CAPSTONE | THE REVIEW BOARD

Committee decision sheet

You have another group's pack. Read it in silence for six minutes and mark gaps on it with red sticky notes. Then decide. The authors say nothing until you have read your conditions aloud.

Committee roles	Name
Chair: runs the 14 minutes, fills in this sheet	
Risk reviewer: rules, data, risk class	
Operations reviewer: alerts, cost, guardrails, drift	
Sceptic: asks "what stops it?" of every line	

Our decision (hold up the cards at the same moment): A = sign | B = sign with conditions | C = do not sign

- ☐ Sign (A)
- ☐ Sign with conditions (B)
- ☐ Do not sign (C)

Condition	Owner	By when	Evidence we would want to see

What we could not judge from this pack:

Authors, when the pack comes back: write *accept* or *challenge* beside each condition, and choose the single most useful condition for the wall.
