ACTIVITY 8

Six questions for any vendor, and the match

Take three conditions from your decision sheet. For each, write a category of tool, or **a person**, or **a process**. That is a legitimate answer.

Condition from your decision sheet	Category (red teaming, guardrails and runtime protection, evaluation, monitoring and observability, security posture and	The vendor question you would ask

Six questions for any vendor

1. What exactly did you test, against which version, and in which languages?
2. Who or what judged the result, and what did a person check by hand?
3. What did you not test, and how would we know?
4. How often is it re-run, and what triggers a re-run (a model, prompt or tool change)?
5. Who owns a finding, and what is the route into change control?
6. What does the contract say about our data, the subprocessors, and a change you make without telling us?
