THE MORNING MESSAGE

An overnight agent compares 18,400 transactions between two systems. Read its event log. Mark in red every line a person would have wanted to know about.

Time	Event
22:00	Run started. Comparing 18,400 transactions between System A and System B.
22:01	Connected to System A. Connected to System B.
22:40	3,000 of 18,400 compared. 4 discrepancies flagged.
23:30	7,000 of 18,400 compared. 8 discrepancies flagged.
00:50	11,040 of 18,400 compared. 12 discrepancies flagged.
00:50	ERROR: connection to System B lost.
00:50	Retry 1 in 30 seconds: failed.
02:00	Retry 140: failed.
04:00	Retry 380: failed.
05:30	Retry 560: failed.
06:50	Retry 720: failed.
06:50	Retry limit reached. Ending run.
06:51	Writing summary for the morning review team.
06:51	MESSAGE SENT: "Run completed. 12 discrepancies flagged for review."

Your task

- Write the message the agent should have sent. Three lines at most: what was done, what was not, and what a person needs to do.
- Write one escalation trigger that would have woken someone before morning. Specific enough that two people would apply it the same way.

The message the agent should have sent

The trigger: If ... then ...

SPOT THE DIFFERENCE

A loan triage agent was approved six months ago. Today an auditor asks, "is this the agent security approved?" This is the approved baseline. The next page is what is running today. Circle every difference.

Item	Approved baseline (2 April 2026)
Model	Provider model X, pinned to version 2026-03-01
Platform base prompt	Owner: Platform team. Hash a41f. Release notes: not subscribed
CSOB system prompt	Owner: Credit Risk. Hash 77be
Tools	lookup_applicant, read_credit_summary, create_triage_note
Tool description: read_credit_summary	Hash d3a9
Retrieval index	policy-index version 12
Guardrail	Refer to an underwriter if risk score is 0.55 or above
Escalation rule	Escalate when debt-to-income is above 45% or any phrase from the hardship list appears
Approved by	A. Novak, Credit Risk. Security review report ref SR-2026-041

SPOT THE DIFFERENCE: running today

Item	Running today (2 November 2026)
Model	Provider model X, alias "latest" (currently resolves to the 2026-09-15 build)
Platform base prompt	Owner: Platform team. Hash 9c07. Release notes: not subscribed
CSOB system prompt	Owner: Credit Risk. Hash 77be
Tools	lookup_applicant, read_credit_summary, create_triage_note, lookup_employment_history
Tool description: read_credit_summary	Hash 5e12
Retrieval index	policy-index version 15
Guardrail	Refer to an underwriter if risk score is 0.70 or above
Escalation rule	Escalate if unsure
Approved by	A. Novak (no longer at CSOB since August 2026). Security review report ref SR-2026-041

Your task

- Circle every difference. Classify each: alias moved, upstream prompt edited, tool description changed, scope creep, knowledge or index changed, guardrail loosened.
- Decide for each: block, re-test, or accept with a named approver. Write who should have been told.
- Pick one real incident card (Knight Capital, GPT-4o, Grok, DPD) and write which line of this record would have shown the change, and when.
