The five-step AI workflow

Use the same five steps for every document, every time.

1. Identify the process. What is the task, what do you put in, and what do you need out?
2. Set the goal. Write the brief: the role, the context, the task, the format and the limits.
3. Let AI work. Ask for a draft, a table or an analysis.
4. Check the result. Look for wrong facts, invented facts, bias, missing steps and anything that does not match your standards or templates.
5. Refine. Fix the prompt or the output, and save what worked for next time.

Questions for step 4

- Can I find every figure and claim in a source I trust?
- Has it said anything the documents do not say?
- Is anything missing that I would expect to see?
- Would I be comfortable signing this with my name on it?
- Who else must review it before it goes out?

Always a person's job

Safety documents, legal commitments, prices, and anything sent to a client or regulator.
