Lab 2.1: PQQ answer skill

Time: 35 minutes. Material: samples/day2-pqq-questions.pdf, handouts/skill-template.docx.

A skill is a workflow written down once, so anyone on the team can run it. In this lab you write a skill that drafts PQQ answers from approved facts, then test it.

Tendering group: build the skill for questions 1, 3 and 4. Safety group: build it for questions 1 and 6.

Your Task

1. Give ChatGPT the approved company facts and the two past answers.
2. Ask it to turn them into an answer bank with one entry per topic and the approved facts.
3. Open the skill template. Write a skill called pqq-answer: a description of when to use it, the steps, the answer bank as its reference, the limits and the check. Ask ChatGPT to help with the wording, then edit it yourself.
4. Run the skill on question 1 from the new questions. Check that it flags anything it needed that is not in the bank.
5. Check every figure and claim against the approved facts.
6. Fix the skill where it let something through, and save it.

Outcome

You have a working PQQ answer skill, a short answer bank, and one tailored answer with every fact checked.
