Lab 2.2: Tender compliance skill

Time: 50 minutes. Material: samples/day2-tender-extract.pdf, handouts/skill-template.docx.

Scoring is what wins a tender, so the effort goes where the marks are. In this lab you write a skill that turns a tender into a compliance matrix, then use it to draft one answer inside its word limit.

Tendering group: lead on the matrix and drafting. Safety group: lead on the safety and environment criterion and the protection of the stream.

Your Task

1. Open the skill template. Write a skill called tender-compliance. It should list every requirement with its source section, build a matrix with the requirement, where it will be answered, the evidence needed and an owner, and flag anything it cannot find.
2. Upload the tender extract and run the skill.
3. Check the list against the original, line by line. Mark what it missed or got wrong.
4. Ask for the award criteria and weightings and for a view on where the effort should go.
5. Choose one criterion and ask for a draft answer inside its word limit. Check the word count yourself in Word, then ask ChatGPT to cut it by 20% without losing any evidence.
6. Update the skill so it avoids the mistakes you found. Save it.

Outcome

You have a compliance skill, a matrix that has been checked, and one draft answer inside its word limit with the facts checked.
