Lab 2.3: Project case study

Time: 20 minutes. Material: samples/day2-project-notes.pdf.

Project notes are messy and sometimes contradict each other. In this lab you turn them into a case study without letting ChatGPT smooth over the gaps.

Your Task

1. Give ChatGPT the project notes.
2. Ask for a 300-word case study under the headings Challenge, Approach and Outcome.
3. Ask it to mark every number and claim as supported or not supported by the notes.
4. Ask what is missing or contradictory and what you would need from the project team.
5. Decide which claims you would remove until they are confirmed.

Outcome

You have a draft case study and a list of facts to confirm before you use it.
