Lab 2.4: Method statements

Time: 25 minutes. Material: samples/day2-site-scenario.pdf.

ChatGPT can draft a method statement quickly, but a competent person must still review and sign it. In this lab you draft, review and list what a person has to check.

Safety group: lead on the review. Tendering group: lead on the draft, as for a tender method statement.

Your Task

1. Give ChatGPT the site scenario and ask for a method statement with the sequence of work, plant, labour, traffic management, utilities, emergency arrangements and environmental controls.
2. Open a new chat. Paste in the draft and ask it to review the draft for gaps and inconsistencies.
3. Read the review and write down what it missed that you would expect to see.
4. Fix the draft.
5. List what a competent person still has to check and sign before the method statement is used.

Outcome

You have a draft, a gap list and a list of human checks.

This is invented material. It is not for use on a real site.
