Lab 2.5: Risk assessments and toolbox talks

Time: 25 minutes. Material: samples/day2-site-scenario.pdf.

A risk assessment draft is a starting point, never a finished document. In this lab you test a draft against your own knowledge.

Safety group: lead on the assessment. Tendering group: lead on the toolbox talk and its plain-English wording.

Your Task

1. Ask ChatGPT for a risk assessment table for the trench works with the hazard, who could be harmed, the controls and the remaining risk.
2. Write down the three controls you expect to see. Check each is in the table.
3. Ask for a ten-minute toolbox talk on one hazard in plain English for the crew.
4. Mark anything in the assessment or the talk that you would change.
5. Write down who must review and sign each document before it is used.

Outcome

You have a draft assessment, a draft talk and a note of what has to be reviewed.

This is invented material. It is not for use on a real site.
