Lab 2.6: Quality and environmental documents

Time: 20 minutes. Material: samples/day2-quality-environment.pdf.

Good records come from facts, not from fluent writing. In this lab you turn site notes into a non-conformance report and practise for an audit.

Your Task

1. Give ChatGPT the non-conformance scenario and ask for a non-conformance report using only the facts given.
2. Ask for possible root causes and corrective actions. Mark which you would accept and which you would not.
3. Give ChatGPT the audit preparation notes and ask for the questions an auditor is likely to ask about one procedure.
4. Answer two of the questions out loud to the person next to you.
5. Note what ChatGPT assumed that the notes did not say.

Outcome

You have a draft report with checked facts and a set of practice audit questions.

This is invented material.
