Handout: Agent Configuration Record (AI-BoM)

Configuration & Drift · 11:00 – 12:15 · optional step in the tabletop

One page that says what an agent is made of, so that two snapshots can be compared. Fill it in for a real agent, or for the agent in your tabletop scenario. Record a hash or version, not a description. The test: could someone else tell, from this page alone, whether the running agent matches the approved one?

Agent name		**Business owner**	
Record revision		**Approved on / by**	

1. Model

Model name	Pinned version (not an alias)	Provider and region	Who is told if it changes

2. Prompt layers

Layer (platform / parent / vendor / CSOB / user)	Hash or version	Owner	Last changed

3. Tools and MCP servers

Tool or server	Version	Description hash	Scopes and credential	Owner

4. Knowledge

Source	Index version	Access rule (security trimming)	Owner

5. Guardrails, policy and escalation

Rule or guardrail	Where it sits (input / output / action / human)	Version and threshold	Owner

6. Change log

Date	What changed	Who was told	Re-test run? Result
