Workshop Worksheet: Autonomy Spectrum & Memory Tiers

Foundations of Agentic Logic · 15:15 – 16:30

Work in groups of 3–4. Pick one AI use case, place it on the autonomy spectrum, sketch its memory tiers, and flag one retrieval or data-access question you'd want answered before it goes to production.

1. Use case

Use case (one sentence)	

2. Autonomy today

Autonomy today	□ Assistive □ Semi-autonomous □ Fully autonomous
Where it's likely to drift in 12 months	
Blast radius if wrong for 1 hour, unsupervised	

3. Memory tiers

Working / context window: what's in it	
Session memory: what's in it	
Long-term / persistent store: what's in it	
Retrieved knowledge: what's in it	
Where each layer runs (managed cloud, on-premises or both), and who operates it (CSOB, parent organisation or vendor)	

It's fine for a tier to be empty; say so and why.

4. One open question

One retrieval or data-access question you'd want answered before production
