Capstone Worksheet: Governance & Risk Review

Governance, Evaluation & Ops · 14:30 – 15:45

Use your Day 2 architecture sketch, or a Day 2/Day 3 case study if your group didn't keep its sketch. Bring your control ownership matrix from this morning. This is illustrative practice, not a binding classification; CSOB's own legal/compliance function makes the real call.

System (one sentence)	
Provisional EU AI Act risk class	☐ Unacceptable ☐ High ☐ Limited ☐ Minimal
Justification	
Uncertain aspects of the classification	
PII / sensitive-data touchpoints (list each memory tier / protocol boundary)	
Data residency risks	
Required observability before go-live	
Required guardrails, and where they sit (input / output / action / human)	
Configuration record and drift detection	
Required chaos / failure testing before go-live	
Who would operate each requirement	
Must-have versus nice-to-have for go-live	
Single biggest open question for CSOB's own risk function	

Presentation (5 minutes)

Cover: the system in one sentence, its risk classification · its two biggest touchpoints · the one operational requirement you would insist on before sign-off.
