Lab 1.1: Rewrite your prompts

Time: 30 minutes. Material: samples/day1-weak-prompts.pdf, handouts/prompt-library-template.docx.

A prompt gets better when it carries a role, the context, the task, the format you want and any constraints. In this lab you test that on your own work.

Your Task

1. Pick two prompts from the sample list, or use one real prompt from your own work with no confidential details.
2. Send the weak version and copy the answer into a note.
3. Rewrite the prompt using role, context, task, format and constraints.
4. Send the rewrite and compare the two answers.
5. Send one follow-up that fixes the biggest problem left in the rewritten answer.
6. Save the best version of each prompt in your prompt library.
7. Swap with the person next to you and say what you would change in their rewrite.

Outcome

You have two before-and-after pairs and your first two prompt library entries.
