Lab 1.2: Documents and PDFs

Time: 35 minutes. Material: the contract extract (samples/day1-contract-extract.pdf), supplied as a PDF.

ChatGPT reads documents quickly, but it can state things the document does not say. In this lab you check it against the source.

Your Task

1. Upload the contract extract.
2. Ask for a plain-English summary for a site manager in 150 words.
3. Ask for a table of payment terms, retention, insurance, programme dates and variations, with the clause number for each.
4. Check three rows of the table against the document. Mark each one correct, wrong or not in the document.
5. Ask: "What are the liquidated damages for late completion?" Read the answer, then look for the clause in the document.
6. Ask ChatGPT to list the subcontractor's obligations and to say where it is unsure.
7. Write down the check you will make before you rely on any summary of a document.

Outcome

You have a table you have verified and a note of anything ChatGPT got wrong or invented.
