Lab 1.3: Word and Excel

Time: 30 minutes. Material: samples/day1-plant-log.csv, opened in Excel.

Messy exports are a good job for ChatGPT, but the totals still need a human check. In this lab you clean a table and draft a short report.

Your Task

1. Upload the plant log, or paste a part of it.
2. Before changing anything, ask ChatGPT to list the problems it can see: dates, machine names, units and blanks.
3. Ask for a cleaned version and a list of every change it made. Where your plan allows it, ask for a file you can download. Otherwise ask for a table.
4. Check three changes and the hours total for one machine against the original.
5. Ask for total hours per machine and a two-paragraph summary for a weekly report.
6. Paste the summary into Word and tidy it in your own words.

Outcome

You have a cleaned table with a change log, a short weekly summary, and a habit of adding up the totals yourself.
