Lab 1.4: Research and verification

Time: 20 minutes.

ChatGPT can search and summarise, but sources can be wrong or missing. In this lab you check every claim it makes.

Your Task

1. Ask for a one-page briefing on a topic from your own work, for example common causes of delay on drainage projects in wet weather. Ask for sources with links.
2. Open every link. Mark each claim verified, not found or wrong.
3. Ask ChatGPT where it is least sure and what you would need to check.
4. Compare your marks with the person next to you.
5. Write one rule you will follow before using researched material in a tender.

Outcome

You have a list of verified claims and your own rule for using researched material.
